Application for Knowledge Engineer

Dear Fusion Consulting team,

I am writing to apply for the Knowledge Engineer position at Fusion Consulting. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the last year my main work has been a knowledge graph that AI agents query and domain experts curate.

At Kniit I am the sole developer of a knowledge-extraction system for the German energy sector, reporting to the CTO. LangGraph agents for entity extraction, relationship analysis, consolidation and reflection turn regulatory and technical documents into entities and relationships in Neo4j. I measured the result against a ground truth derived from SAP system data and raised precision and recall from 33% and 45% to 93% and 90%. The domain logic came from SAP domain experts, so I built Expert Interface, a React and Python app on Azure where they validate and approve changes to the graph. I also built an MCP query service that exposes the graph with millisecond-latency retrieval, integrated into Claude Code for agentic development workflows.

On formal representation I want to be precise. My professional graph work is in a property graph, not in OWL. The RDF, OWL and SPARQL side comes from my studies, where I built a knowledge graph as a learning resource for AI students with Protégé and rdflib, including information extraction with NLTK, SPARQL queries and OWL enhancement. I have not yet used Stardog or AWS Neptune in a job. What I bring is the hands-on part: turning messy domain documents into a structure that holds up when it is measured.

Business translation is something I have done before: in my AI consulting internship at Covestro I worked with business stakeholders to understand their decision workflows and turned their requirements into a solution approach before building a LangGraph application on AWS.

What draws me to Fusion is the goal of the role: ontologies that serve conversational analytics, AI agents and cross-domain reasoning at the same time instead of a single use case. Your focus on S4HANA fits my background too: at Kniit my ground truth came from SAP system data and I worked closely with SAP domain experts.

I will be based in Düsseldorf, am happy to travel to clients, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
