Application: Application Engineer (f/m/d), Healthcare Integration & AI Solutions

Dear Hiring Team,

I am writing to apply for the Application Engineer position in Healthcare Integration & AI Solutions at SAP. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and my day-to-day work is Python services, REST APIs and cloud deployment, which is what this role is built on.

At Kniit GmbH I was the sole developer on a knowledge-extraction system for the German energy sector. I designed, built and shipped it myself, from ingestion to deployment on Azure, reporting to the CTO. I worked daily with SAP domain experts, and the extraction accuracy is measured against ground truth taken from SAP systems. Precision and recall went from 33% and 45% to 93% and 90%. Working with SAP domain experts and turning their feedback into features is the kind of collaboration your posting describes between engineering, product management and customers.

For the integration side, I built a Python microservice backend with REST APIs behind a React interface, so domain experts can review and approve changes to the knowledge graph. I also built a Model Context Protocol service that other tools query in milliseconds. At Covestro, I containerized an application with Docker, deployed it to AWS with CDK and ran it through GitLab CI/CD, with APIs tested in Postman. I use Claude Code and my own skills in daily development, so using AI to raise engineering productivity is an established habit for me. I have not worked with SAP BTP or SAP LoB integration yet, and I would learn it on the job.

Healthcare is a new domain for me, and I am looking forward to learning its workflows and data protection requirements from the people who work in it. What draws me to this team is the mix of strategic customers and healthcare start-ups in Germany, with engineering in Bangalore and product management in Munich and Walldorf. Working across those groups to make connected healthcare solutions interoperable with SAP is work I would like to take on.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. I work in German at B1 level and communicate fluently in English. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
