Application for Data Scientist (NLP Deep Learning Engineer)

Dear Hiring Team,

I am writing to apply for the Data Scientist (NLP Deep Learning Engineer) position at Revolut. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently with LLMs and agents on real company data.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I built LangGraph multi-agent LLM extraction for complex regulatory documents and raised precision and recall from 33% and 45% to 93% and 90%, measured against ground truth from the SAP system. For a second, high-volume source I replaced the LLM calls with a code-based pipeline, which cut a projected $200,000 LLM budget to near zero. I also built an MCP query service and a React and Python interface that domain experts use to approve changes, so I know the step from research idea to something people rely on.

My deep learning work in NLP started earlier. For my Master's thesis at Covestro I designed RAG pipelines, fine-tuned models for retrieval and benchmarked multilingual embedding models on more than one million chunks, evaluating answers with RAGAS against ground truth from chemists. I have also fine-tuned an Open Llama 3B model with QLoRA. As an AI consulting intern at Covestro I built an agentic assistant with LangGraph, FastAPI and React, then deployed it on AWS with Docker, CDK and GitLab CI/CD.

Revolut's Deep Learning Engineers build assistants, chatbots and copilots from scratch and ship them to millions of customers. That mix of new product work and production scale is what I want to do next. Working with Product Owners and Operations is familiar to me: at Kniit I worked daily with the CTO and SAP experts, and at Covestro with chemists and business stakeholders.

I am based in Germany, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
