Application for Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at A11. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer on an agentic system that domain experts use every day.

At Kniit, I sat with SAP experts from the German energy sector, learned how they read regulatory and technical documents, and built a LangGraph multi-agent pipeline that extracts knowledge from them. Precision and recall went from 33% and 45% to 93% and 90% against ground truth from their own SAP system. For a second, high-volume source I replaced the LLM calls with deterministic code, which cut a projected $200,000 LLM budget to almost no recurring cost. Knowing when an LLM is the wrong tool is a big part of the job for me.

Reliability and human review matter most where money is involved. I measured the Kniit pipeline against ground truth, and I built an Expert Interface in React and Python on Azure where the experts approve every change to the knowledge graph before it goes live. At Covestro I wrote my thesis on evaluating RAG systems with RAGAS and PytrecEval against answers from chemists, and as an AI Consulting Intern I worked with business stakeholders to map their decision workflows before designing an agentic application with LangGraph, FastAPI and React.

I work in Python and SQL every day and I am used to messy inputs such as long regulatory PDFs and sensor time series. I also build with Claude Code and custom skills, so a first version in days is how I normally work. I have not shipped much TypeScript yet, but I know React and learn new stacks fast.

A11's platform caught my attention because the work sits close to the people running the trade. Finding where procurement, sales and finance lose hours, then building the agent that takes it over, is the kind of work I want to do. A company of 80+ people that is still scaling suits me too, since at Kniit, a small startup, I owned the whole pipeline.

I am based in Berlin, hold an EU Blue Card, and can start on 15 November 2026. I am happy to travel to the team when needed. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
