Application as Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at Andercore. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently working side by side with domain experts to turn their manual document work into agents they could rely on.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I sat with SAP experts, learned how they read regulatory documents, and built LangGraph agents that extract entities and relationships from them. Precision and recall went from 33% and 45% to 93% and 90%, measured against ground truth derived from their SAP system. For a second, high-volume source I replaced the LLM calls with deterministic code, which cut a projected $200,000 LLM budget to near-zero running cost. That is the judgment you describe: knowing where an LLM helps and where plain code is better.

Trust in agents came from evaluation and review. At Covestro I built the evaluation setup for a RAG system with RAGAS and PytrecEval against chemist-provided ground truth, and at Kniit I built a React and Python web app so experts could approve every change to the knowledge graph before it counted. I work in Python, SQL and Postgres, and I am used to messy inputs such as PDFs and technical documents. During my consulting internship at Covestro I talked to business stakeholders about their decision-making workflows and turned their requirements into an agentic application with FastAPI, React, Docker and AWS CDK.

Andercore's approach interests me because the agents already take part in real trades, from scheduling deliveries to requesting freight quotes, and the work is to make them dependable for the teams that use them. Building small first versions with those teams and turning what works into reusable components is the way I like to work. I am based in Berlin, I hold an EU Blue Card and I can start on 15 November 2026. My German is B1, and I am happy to work in English.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
