Application as Forward Deployed Engineer (Applied AI / LLM Agents)

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer (Applied AI / LLM Agents) position. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agent system that I built together with the domain experts who use it.

At Kniit I owned a knowledge-extraction pipeline for the German energy sector from ingestion to deployment. I worked with SAP experts to understand how they read regulatory documents, then built LangGraph agents that extract entities and relationships from them. Precision and recall went from 33% and 45% to 93% and 90%, measured against ground truth derived from their SAP system. For a second, high-volume source I replaced the LLM calls with deterministic code, which cut a projected $200,000 LLM budget to near-zero running cost. I also exposed the knowledge graph through an MCP service and built a React and Python web app on Azure where experts approve changes.

Evaluation is a habit for me. My Master's thesis at Covestro was about evaluating RAG systems with RAGAS and PytrecEval against chemist-provided ground truth, on AWS infrastructure I built with CDK. During my consulting internship there I spoke with business stakeholders about their decision-making workflows and turned their requirements into an agentic application with FastAPI, React, Docker and a deployment on AWS. I work in Python and SQL with Postgres, and I am used to integrating systems through REST APIs.

The role is small team, real customers and ownership from first workshop to a monitored deployment, and that is the way I like to work. Taking prototypes to production and turning what works into reusable components for the next customer appeals to me. I am willing to travel to the United States when needed. I hold an EU Blue Card, I am based in Germany, I can work fully remote and I can start on 15 November 2026.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
