## Application for Data Platform Engineer – Data Operations

Dear Hiring Team,

I am writing to apply for the Data Platform Engineer – Data Operations position at STARK. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part of that work I enjoy most is the data side: getting messy source material into a form other engineers can trust and reuse.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, owning it from ingestion and chunking to indexing, with Postgres, MongoDB and Neo4j behind it. When one source stream turned out to be too large for an LLM-based approach, I replaced it with a deterministic, code-based pipeline and cut a projected $200,000 LLM budget to near-zero recurring cost. I also built a curation web app with a React frontend and Python microservices on Azure, so domain experts could review and approve changes to the data themselves. That is close to your idea of internal tools that make data searchable and traceable for other teams.

On the engineering side, I work in Python with FastAPI, Docker and GitLab CI/CD, and I have deployed to AWS with CDK and to Azure. My experience is mostly with S3 rather than GCS, and I have not worked with ROS bags or MCAP yet. To get closer to your data, I am preparing a small Python ingestion service for multi-modal robot recordings that validates frame drops and timestamp drift, compresses video and uploads with a manifest.

I have also worked between technical and non-technical groups: with SAP experts and the CTO at Kniit, with chemists at Covestro, and with business stakeholders during my consulting internship there. Coordinating labeling vendors would be new to me, but writing the checks that tell you whether a delivery is good is something I already do when I evaluate extraction quality against ground truth.

STARK is building its data advantage in-house instead of buying it, and the team is still small enough that one engineer can shape the platform. That is the kind of scope I am looking for.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. I am fully willing to travel. Thank you for considering my application.

Kind regards,

**Chandu Prasad Bhairapu**
