Application for Data Scientist (f/m/d)

Dear Hiring Team,

I am writing to apply for the Data Scientist position at thinkcell. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a data science background in predictive modelling that I now combine with production engineering.

At Covestro I worked as a Data Scientist (Intern) predicting prepolymer synthesis outcomes from sensor time-series. I engineered lag features and rolling windows, compared Random Forest, XGBoost and an LSTM, and benchmarked them against the empirical curve-fitting the chemists already used. The point was to flag batches likely to miss specification early, so I put the models into a Streamlit dashboard where chemists could try parameter changes before running a physical batch. That taught me to judge a model by whether people could act on it.

At Kniit I was the only developer on a knowledge-extraction pipeline for the German energy sector and reported to the CTO. I measured it against ground truth derived from the customer's SAP system, and precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with deterministic code, which removed a projected $200,000 LLM budget. Choosing the simplest reliable solution was the whole job there. During my thesis I evaluated RAG systems against chemist-provided ground truth, so I am used to asking what the data can support.

My day-to-day tools are Python, SQL and scikit-learn, and I have worked with Pandas, SciPy and XGBoost. I have also had to explain results to non-technical stakeholders, from SAP domain experts to chemists, and to tell them where a model's limits were.

thinkcell is used by over 1.3 million people, and a data team of senior individual contributors who own problems from outcome definition to monitoring is the setting I want to work in. I would like to build features and scores that Product and Marketing can use for real decisions.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
