Application for AI/ML Engineer

Dear Hiring Team,

I am writing to apply for the AI/ML Engineer position at YLAB. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly LLM pipelines that had to be measured and then run reliably.

At Kniit I was the only developer on a knowledge-extraction pipeline for the German energy sector and reported to the CTO. I measured it against ground truth derived from the customer's SAP system, and precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with deterministic code, which removed a projected $200,000 LLM budget. Keeping the stack simple and the cost under control was the job, which sounds close to your wish for one robust path instead of five half ones.

Evals are where I have the most practice. For my thesis at Covestro I automated RAG evaluation with RAGAS and PytrecEval against ground truth provided by chemists, and I benchmarked multilingual embedding models on more than a million chunks. I would like to apply that to a set built from real children's questions, where nobody has agreed yet what a good explanation is.

On the production side, I deployed an agentic application at Covestro with Docker and AWS CDK, and at Kniit I ran services on Azure, built in Python with FastAPI and a React interface. Speech is new to me as a product area. I have not shipped ASR or TTS, but I know how to build and test a pipeline around a model, and I would like to dig into it.

What draws me to YLAB is that the safety layer is treated as part of the design: a screen-free companion with no camera, no ads and no data sales, where every answer is checked before a child hears it. Being the first dedicated AI/ML hire, with a say in the stack, is the kind of ownership I want.

I am based in Cologne, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
