Application for Data & Backend Engineer (f/m/d)

Dear Hiring Team,

I am writing to apply for the Data & Backend Engineer position at Inverto. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently data and AI pipelines behind a web application, which is close to what this role describes.

At Kniit I am the sole developer of a pipeline for the German energy sector. I own it from ingestion and chunking to indexing into a Neo4j knowledge graph. Against a ground truth derived from SAP systems I raised precision and recall from 33% and 45% to 93% and 90%, so I build data quality checks in from the start. For a second, high-volume source I wrote a deterministic, code-based pipeline, which removed a projected $200,000 LLM cost. I also built the Expert Interface, a React and Python microservices application on Azure that lets domain experts approve changes to the data.

On the backend and DevOps side, I built FastAPI services and tested them with Postman at Covestro, containerised the stack with Docker and deployed it to AWS with CDK, using GitLab CI/CD. I work in Python and SQL with Postgres and MongoDB. I have not used Azure DevOps itself, only GitLab CI/CD and Azure hosting, and I would pick it up quickly. I have also integrated LLMs into production pipelines with LangGraph, LangChain and LiteLLM, and I have worked directly with business stakeholders, from SAP experts to chemists.

Inverto's Business Services team builds the tool and AI landscape that its consultants use every day. Taking ownership of the data infrastructure under it, from the warehouse structures to the APIs and deployment, is the kind of role I am looking for.

I am based in Cologne, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
