Application for Junior Data Engineer for Live Intelligence (m/w/d)

Dear Hiring Team,

I am writing to apply for the Junior Data Engineer for Live Intelligence position at CIMPA. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently pipelines that turn unstructured documents into a knowledge graph, which is close to the data engineering, AI and knowledge-graph work in your posting.

At Kniit I am the sole developer of a knowledge-extraction pipeline for the German energy sector. I own it from ingestion and chunking to indexing into a Neo4j knowledge graph. Several LangGraph agents extract entities and relationships in parallel, and against a ground truth derived from SAP systems I raised precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume source I wrote a deterministic, code-based pipeline instead, which removed a projected $200,000 LLM cost. Domain experts approve changes to the graph in a React and Python web app on Azure, so data quality is checked by the people who know the data.

My earlier work was closer to classic data analytics. At Covestro I built models on sensor time-series from chemical synthesis, with feature engineering in Pandas and a Streamlit dashboard that let chemists try parameter changes before running a batch. In my Master's thesis I designed RAG pipelines, built the AWS evaluation infrastructure (Lambda, SQS, DynamoDB, deployed with CDK) and compared multi-lingual embedding models on more than one million chunks. I work in Python and SQL with Postgres, MongoDB and Neo4j, and at Covestro I deployed through GitLab CI/CD. I have not worked in PLM yet and would learn the domain from your projects.

CIMPA's mix of PLM and trade-compliance projects for aerospace, automotive and energy customers means the data is regulatory and highly interlinked. That is close to what I do at Kniit, where the hard part was relating regulatory documents to each other in a graph. A structured training plan for people starting out is a good fit for where I am with the industry side.

I am based in Hamburg, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
