Application for Forward Deployed Engineer - German Speaking

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer (German Speaking) position at HappyRobot. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system for the German energy sector, where I worked directly with the people who use it.

At Kniit I owned a knowledge-extraction pipeline from ingestion to indexing. I built multi-agent LLM workflows in LangGraph and iterated on the prompts until precision and recall rose from 33% and 45% to 93% and 90%. I also built an MCP query service and a React and Python web app on Azure that lets SAP domain experts approve changes. Those experts were my customers: I sat with them, learned how they decide, and changed the system until it fit their work.

At Covestro I did the same kind of work from the consulting side. As an AI Consulting Intern I talked to business stakeholders about their decision-making workflows, advised on where agentic AI could help, and then built it: a LangGraph application with a React front end and a FastAPI backend, containerised with Docker and deployed on AWS with CDK. My Master's thesis there covered RAG evaluation and embedding benchmarks on more than a million data chunks.

HappyRobot interests me because your AI workers act inside real enterprise operations, not only in demos, and a Forward Deployed Engineer is close to that work from the first onboarding call. I have not tuned voices or transcribers yet, and my TypeScript and Node.js are less deep than my Python, but I learn quickly and ship end-to-end.

I am based in Munich, hold an EU Blue Card, speak German at B1 alongside fluent English, and can start on 15 November 2026. I am happy to travel to customer sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
