Application for Applied AI Engineer

Dear Hiring Team,

I am writing to apply for the Applied AI Engineer position at Fuse Energy. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system for the German energy sector.

At Kniit I owned that system from spec to production. Multi-agent LLM pipelines built in LangGraph extract knowledge from regulatory and technical documents, and I measured every change against an SAP-derived ground truth. Precision and recall went from 33% and 45% to 93% and 90%, so I can explain what broke and how I knew the fix worked. I also replaced one LLM-heavy stream with a code-based pipeline, which cut a projected $200,000 model budget to near zero. That was a model-versus-cost decision, the kind your role describes. The knowledge graph is exposed through an MCP service, and a React and Python web app lets domain experts approve changes, so access and review were part of the design.

On the engineering side, I deployed the Kniit app on Azure with Docker and Kubernetes. At Covestro I built an agentic workflow with LangGraph and FastAPI, containerised it and deployed it to AWS with CDK and GitLab CI/CD. My Master's thesis there was on evaluating RAG systems with RAGAS and PytrecEval against ground truth from chemists. Earlier, at Cognizant and in a Covestro internship, I built time-series forecasting models (ARIMA, XGBoost, LSTM), which is useful background for your demand and weather forecasting work.

I would like to work at Fuse because you apply AI directly to the energy products customers use, from bill onboarding to support and back-office tools, instead of keeping it in a lab. Having worked on German energy data, I want to build for the consumer side as well.

I am based in Germany, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application. I would be glad to walk you through the Kniit system in an interview.

Kind regards,

Chandu Prasad Bhairapu
