Application for Software Engineer (gn) Business Acceleration

Dear Hiring Team,

I am writing to apply for the Software Engineer (gn) Business Acceleration position at Wandelbots. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a system that went from first prototype to a running web application together with the people who use it.

At Kniit, a startup in the German energy sector, I worked directly with SAP domain experts and the CTO. I built the Expert Interface, a React front-end with a Python microservices back-end on Azure, where those experts review and approve what the pipeline produces. Behind it sit Python services on Docker and Kubernetes, and agents built with LangGraph. I use Claude Code and agentic coding workflows daily, which keeps iteration fast when a prototype has to be ready quickly.

As an AI consulting intern at Covestro, I talked to business teams about how they make decisions, then built an agentic application around it: a FastAPI back-end, a React front-end, Docker, and deployment on AWS with CDK and GitLab CI/CD. That is the customer-facing, full-stack work your posting describes. My Kubernetes experience comes from Kniit, and I have not worked professionally in robotics. I would learn your robot platform on the job.

Wandelbots interests me because Wandelbots NOVA ties data, AI and digital twins to industrial robots, and your Business Acceleration team takes customer problems into Design Sprints and hackathons and comes out with products. Small teams, close customer contact and quick prototypes are how I work best.

I am based in Dresden, hold an EU Blue Card and can start on 15 November 2026. I am happy to work on-site in Dresden. My German is at B1 level and I am improving it; my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
