Application for Software Development Engineer II, PartyRock

Dear Hiring Team,

I am writing to apply for the Software Development Engineer II position at Amazon Web Services. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly as the person who owns a feature from the database to the deployed service, which is how your team describes its engineers.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector. I built the Expert Interface myself, a React front end on top of Python microservices on Azure, so domain experts could review and approve changes to the knowledge graph. Behind it sat a multi-agent LangGraph pipeline whose precision and recall went from 33% and 45% to 93% and 90%, and a code-based extraction path that removed a projected $200,000 LLM budget. I worked with the CTO and SAP experts directly and shipped in small steps.

The AWS side is close to your stack. At Covestro I deployed an agentic application with a React front end and a FastAPI backend to AWS using CDK, with Docker and GitLab CI/CD. For my Master's thesis I built Lambda, SQS and DynamoDB infrastructure with CDK to run RAG evaluation at scale. Code reviews, source control and testing are part of how I deliver. I should say plainly that my production TypeScript experience is limited: my front-end work is in React and my backend work is in Python. I expect to pick up your TypeScript-first codebase quickly, with Claude Code and the team's reviews.

PartyRock appeals to me because it lets people learn AI by building something they care about, instead of reading about it. Most of my work has been turning LLM ideas into tools that non-specialists use, and I would like to do that for students and educators. I am comfortable with an on-call rotation and with working from the Berlin office.

I am based in Berlin and hold an EU Blue Card, so I need no visa sponsorship. I can start from 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
