Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at CluePoints. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently RAG and knowledge-graph services whose results domain experts have to be able to check.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, working from messy regulatory and technical documents. I built multi-agent extraction in LangGraph and measured it against an SAP-derived ground truth, which took precision and recall from 33%/45% to 93%/90%. For a second, high-volume source stream I replaced the LLM with a deterministic pipeline, because the evidence said code was the better tool. That cut a projected $200,000 LLM budget to near zero. The results sit in a Neo4j knowledge graph, which I exposed through an MCP query service with millisecond retrieval.

Human review was part of that design. I built an Expert Interface (React, Python microservices, Azure) where domain experts validate and approve every graph change. In my Master's thesis at Covestro I worked on the evaluation side of RAG: automated generation and retrieval evaluation with RAGAS and PytrecEval against chemist-provided ground truth, and a benchmark of multilingual embedding models on over 1M chunks of internal data. At Covestro I also shipped an agentic application with FastAPI, Docker, AWS CDK and GitLab CI/CD.

Your role is to build the AI layer on a new data layer, and to do it so the outputs can be defended in front of an auditor. That the approach is still open, and that you want it chosen on evidence rather than fashion, is what draws me to it. Mapping differing study variables onto a common structure with retrieval, metadata and reviewed examples is close to the extraction and evaluation work I have done. I have no clinical-trial background and no Databricks or Snowflake experience, but I have worked with regulated and technical source material and with Azure, and I pick up new domains quickly.

I am based in Germany, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
