Application for AI-Experience Consultant - Business Consulting

Dear Hiring Team,

I am writing to apply for the AI-Experience Consultant position at EY. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic knowledge-extraction system for the German energy sector.

Your role starts with a customer process and ends with a working prototype. At Covestro I did that as an AI consulting intern: I talked to business stakeholders about how they make decisions, advised where agentic AI could help, and built the result with LangGraph, a FastAPI backend and a React front-end, deployed on AWS. At Kniit I built an Expert Interface for domain experts to review and approve knowledge-graph changes, so their feedback shaped what shipped.

On the technical side I work daily with LLMs, APIs and RAG in Python, and I use Claude and Claude Code in my own workflow. In my thesis I built automated RAG evaluation with RAGAS against ground truth from chemists, which is the kind of success criteria your pilots need. I have not yet worked with n8n, Make or Zapier in a client project, but I pick up new tooling quickly and the underlying pieces (APIs, LLM calls, triggers and approval steps) are what I already build in code.

EY Studio+ brings design, technology and AI together under one roof for customers, and I would like to build AI applications with that mix of skills around me instead of in a pure engineering team.

I am based in Munich, hold an EU Blue Card, can start on 15 November 2026 and am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
