Application for LLMOps Engineer for AI Services

Dear Hiring Team,

I am writing to apply for the LLMOps Engineer position at Finanz Informatik. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a production knowledge-extraction pipeline, so running models reliably is a part of the work I already do.

At Covestro I containerized a LangGraph application with Docker and deployed it to AWS with CDK. The code lived in GitLab, and a GitLab CI/CD pipeline handled build and deployment. At Kniit I ran my services in Docker and Kubernetes on Azure, including a Python microservices backend and an MCP query service that answers in milliseconds. These are small pipelines, which fits the first-experience profile you describe.

On the model side I have worked with Hugging Face Transformers, LiteLLM as a single interface to several LLM providers, and QLoRA fine-tuning of open-source models. I have not yet worked with Helm charts, Argo CD, Triton, TGI or Redis in production. Helm and Argo CD are the first things I would pick up, because I already know the container and CI/CD side they sit on.

Your platform serves Sparkassen and their partners, which means models that have to be secure, compliant and available for a very large customer base. I like that this role sits between AI engineering and operations, and that you work with partners like Nvidia and Mistral AI on the model side. Compliance and on-call duty for critical deployments are fine with me.

I am based in Hannover, hold an EU Blue Card and can start on 15 November 2026. I am happy to work from Hannover, Münster or Frankfurt. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
