Application for Software Engineer - AI & Productivity Solutions

Dear Hiring Team,

I am writing to apply for the Software Engineer - AI & Productivity Solutions position at trivago. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer on an agentic knowledge-extraction system, where I shipped everything from the LLM pipeline to the web app people actually use.

At Kniit I built an MCP query service that exposes a knowledge graph with millisecond latency and plugged it into Claude Code, so I have worked on the kind of memory layer for AI that your team is developing. I also built the Expert Interface there: a React front end on Python microservices, deployed on Azure, which lets domain experts review and approve changes to the graph. I work with Claude Code and custom skills every day, and I keep the code clean.

Understanding the people who will use a tool comes first for me. During my internship at Covestro I talked with business stakeholders about how they make decisions, advised them on where agentic AI could help, and turned that into a LangGraph application with a React front end and a FastAPI backend, deployed to AWS with CDK and GitLab CI/CD. At Kniit I worked with SAP domain experts for months and shaped the pipeline around their feedback, which took extraction precision and recall from 33%/45% to 93%/90%.

I also keep costs in view. For one high-volume source at Kniit I replaced LLM calls with a deterministic extraction pipeline, which cut a projected $200,000 LLM budget to near-zero recurring cost. My background is Python, React and cloud rather than C#/.NET, but I pick up new stacks quickly and ship in small steps.

trivago's internal AI work, from Copilot to the Help Center search and the new Skills Library, is a setting where I can own tools from prototype to production and see the effect on colleagues' daily work. The learning culture and the AI-native way of working you describe fit how I like to build.

I am based in Düsseldorf, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application. I would be glad to show you my work in an interview.

Kind regards,

Chandu Prasad Bhairapu
