Application for Agentic AI Engineer

Dear Hiring Team,

I am writing to apply for the Agentic AI Engineer position at NEURA Robotics. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year I have been building multi-agent LLM systems that have to be correct, not just plausible.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector, reporting to the CTO. It runs four LangGraph agents in parallel (extraction, relationship analysis, consolidation and reflection). I evaluated it against a ground truth built from SAP data, which took precision and recall from 33% and 45% to 93% and 90%. Where an LLM was not needed, I replaced it with deterministic code and cut a projected $200,000 LLM budget to almost nothing. Choosing between an agent and a plain workflow is a decision I make on every task. I also built an Expert Interface where domain experts approve changes before they are applied, which is human oversight in a small form.

On the integration side, I built a Model Context Protocol service that gives agents access to our knowledge graph in milliseconds, and a React and Python microservices backend on Azure. At Covestro I turned stakeholder decision workflows into a LangGraph application with FastAPI REST APIs, containerized it with Docker and deployed it on AWS with CDK and GitLab CI/CD. My Master's thesis was about evaluating RAG systems with RAGAS, so measuring whether an agent really did the task is familiar ground.

What I have not done yet is real-time speech or robotics work. Turn-taking and latency tuning in a live voice stack would be new to me, and so would the edge side of a humanoid. I would expect to learn those from your hardware and software teams.

NEURA is putting language-model agents into cognitive robots that act in the physical world, and the Neuraverse platform shares software across your robot types. Building the harness that makes that behaviour dependable is the work I want to do.

I am based in Stuttgart, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is at B1 level and improving. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
