Application for Applied AI Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the Applied AI Engineer position at Etteplan. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agents and retrieval systems that domain experts use on technical documents.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I worked with SAP domain experts to understand what they needed from complex regulatory and technical documents, then built multi-agent extraction in LangGraph that raised precision and recall from 33%/45% to 93%/90%. For a second, high-volume source I replaced the LLM approach with deterministic code and cut a projected $200,000 LLM budget to near-zero running cost. I also built a web interface where the experts review and approve changes, so the system did not depend on me to run.

My Covestro years were close to your world of plants and process data. As an AI consulting intern I talked with business stakeholders about their decision-making, then designed and deployed an agentic application with LangGraph, a FastAPI backend and a React front end on AWS. In my thesis I measured RAG quality against ground truth provided by chemists. Earlier I predicted prepolymer synthesis outcomes from process sensor data and gave chemists a Streamlit dashboard to test parameter changes before running a batch. I am not an electrical or instrumentation engineer, but I am used to learning a domain from the people who work in it and to measuring the result against a baseline.

The part of the role that appeals to me is the insistence that solutions are documented, handed over and still used after the pilot. At Kniit I wrote for the engineers who would maintain the pipeline, and I would work the same way with your project teams and AI champions. Being the first person in this role in Germany, with a direct line to the Vice President Smart Factory Germany and the Group AI team in Finland, is the kind of blank page I would like to work on.

I am based in Leverkusen, hold an EU Blue Card and am willing to travel to project sites. My German is at B1 level, so I would work in English day to day and would like to talk about how German-language engineering documents are handled. I can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
