Application for Data Scientist II, Music DISCO

Dear Hiring Team,

I am writing to apply for the Data Scientist II position at Amazon Music. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a steady base in machine learning, statistical modeling and the evaluation of results against ground truth.

My first data science role was an internship at Covestro, where I predicted the outcome of prepolymer synthesis from sensor time series. I prepared the process data, built lag features and rolling statistics, and compared Random Forest, XGBoost and an LSTM against the chemists' empirical curve fitting. The results helped spot batches likely to miss specification early, and a Streamlit dashboard let the chemists try parameter changes before a physical run. At Cognizant I built ARIMA, SARIMA, Prophet and LSTM forecasting models for EV load, and the LSTM reached 96% test accuracy.

Checking results carefully is what I do most. For my Master's thesis I evaluated RAG systems with RAGAS and PytrecEval against chemist-provided ground truth and benchmarked multilingual embedding models on over a million data chunks. At Kniit I was the sole developer of a multi-agent extraction pipeline for the German energy sector. I measured it against ground truth derived from SAP systems and raised precision and recall from 33%/45% to 93%/90%. I also built a web app there so domain experts could review and approve changes themselves, which is close to the self-service idea in your posting.

In both places I worked with people who were not data scientists: chemists, SAP experts and the CTO. I learned to turn their questions into something testable and to explain results in their terms. I have not yet worked on marketing measurement or causal inference in a job, and I would be learning that side with your team, building on my statistics and experiment-evaluation basics.

Measuring what marketing does for retention and subscriber growth, together with the marketing managers who act on it, is the part of this role that interests me most. Adding AI to the team's self-service tools is the other, since that is the kind of work I have been doing for the last three years.

I am based in Berlin and available from 15 November 2026, and I hold an EU Blue Card. My German is B1 and I work in English every day. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
