Application for Applied AI Engineer

Dear Hiring Team,

I am writing to apply for the Applied AI Engineer position. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agentic systems that run on real company data and are measured against a ground truth.

At Kniit GmbH I am the sole developer of an agentic knowledge-extraction system for the German energy sector, reporting to the CTO and working with SAP domain experts. Multi-agent extraction in LangGraph, including a reflection agent, raised precision and recall from 33%/45% to 93%/90% against a ground truth derived from the SAP systems, so I know what it takes to improve an AI system on evidence rather than opinion. Cost was a constraint too: for a high-volume second source I replaced the LLM calls with a deterministic pipeline and cut a projected $200,000 LLM budget to near-zero recurring cost. I also exposed the knowledge graph through an MCP service for tool calling and use Claude Code and custom skills every day, with review and tests around the generated code.

Evaluation is a thread through my work. My Master's thesis at Covestro automated RAG generation and retrieval evaluation with RAGAS and PytrecEval against chemist-provided ground truth, and I benchmarked multilingual embedding models on over a million chunks. I have also fine-tuned open-source models with QLoRA. In my consulting internship at Covestro I sat down with business stakeholders to understand their decision workflows, then built and deployed a LangGraph application that routes between vector search, general inference and summarisation, with a FastAPI backend, Docker and CI/CD on AWS. I enjoy that part of the job, deciding with a team where AI helps and where it does not.

Your description puts shipping AI that works in production ahead of demos, and that matches how I want to work: evaluation built into delivery, with cost, latency and reliability treated as engineering constraints. I would be glad to bring that to a client-facing team.

I am based in Germany, hold an EU Blue Card, can work remotely and can start on 15 November 2026. I am happy to travel to client sites when needed. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
