Application for AI Developer (KI Entwickler)

Dear Hiring Team,

I am writing to apply for the KI Entwickler position with your client in the financial sector. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agent-based systems that run on real company data.

At Kniit GmbH I am the sole developer of an agentic knowledge-extraction system for the German energy sector. I took it from requirements to deployment, working directly with the CTO and SAP domain experts. Multi-agent extraction with LangGraph, including a reflection agent, raised precision and recall from 33%/45% to 93%/90%, measured against a ground truth derived from the SAP systems. I also exposed the knowledge graph through an MCP service and used Claude Code and custom skills in my daily development, so AI-assisted tooling is part of how I work.

Evaluation is a thread through my work. My Master's thesis at Covestro automated RAG evaluation with RAGAS and PytrecEval against chemist-provided ground truth, and I benchmarked embedding models on over a million chunks. For the thesis I also built the AWS infrastructure (Lambda, SQS, DynamoDB) with CDK. At Covestro I later designed and deployed an agentic application with LangGraph, a React front end, a FastAPI backend, Docker and CI/CD on AWS, after talking through the decision workflows with the business stakeholders. My React experience is at a working level rather than expert, and I have used CDK rather than Terraform for infrastructure as code.

A role that covers the whole lifecycle of agent-based applications, from analysis and design to operation and monitoring, is the kind of work I want to do. I would also like to help build reusable components and evaluation practices for the AI team.

I am based in Frankfurt am Main, hold an EU Blue Card, and can start on 15 November 2026. I am happy to travel when the work needs it. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
