Application for Voice AI Engineer

Dear Hiring Team,

I am writing to apply for the Voice AI Engineer position at Fullstack Talents on behalf of your client. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on Python backends and LLM systems that have to run reliably in production.

Your posting asks for evidence of taking an unclear problem to a working solution. At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, from ingestion and prompt engineering to indexing, and I reported directly to the CTO. I made the architecture calls myself. One of them was replacing LLM calls with a deterministic, code-based pipeline for a high-volume source stream, which cut a projected $200,000 LLM budget to near-zero recurring cost. In the multi-agent pipeline I evaluated the output against ground truth derived from the SAP system and raised precision and recall from 33%/45% to 93%/90%.

Latency and reliability matter in your setting. I built an MCP query service on top of the knowledge graph that returns results in milliseconds and is used directly from Claude Code. Around it I built Python microservices with FastAPI, running on Docker and Kubernetes in Azure. At Covestro I deployed an agentic LangGraph application to AWS with CDK and GitLab CI/CD, and in my thesis I built the evaluation setup for RAG systems with RAGAS and PytrecEval. That is the model-evaluation side of the role. I should be clear that I have not yet run a distributed system at the scale of millions of daily calls, and I have not worked with telephony or speech models in production. I would pick those up quickly, since I work in Python and already evaluate model trade-offs as part of my daily work.

I use AI tools every day, Claude Code with custom skills and agentic coding workflows, and I like pairing on problems I have not seen before. I am comfortable with a fully on-site small team in Berlin and with a startup pace. A product that puts real customer conversations on top of these models is the kind of work I want to own.

I am based in Berlin, hold an EU Blue Card, and can start on 15 November 2026. I am fully willing to travel when needed. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
