Application for R&D AI Specialist (m/w/d)

Dear Hiring Team,

I am writing to apply for the R&D AI Specialist position at Urenco. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system that turns complex technical documents into a queryable knowledge base.

Your role starts with finding the right use cases and ends with productive solutions, and that is how I have worked. At Kniit I owned a multi-agent LLM pipeline (LangGraph) for regulatory and technical documents in the German energy sector, from ingestion and prompt engineering to indexing. I raised extraction precision and recall from 33

Testing AI systems is a topic I know well. My Master's thesis at Covestro was an automated evaluation framework for RAG systems (RAGAS, PytrecEval), run against ground truth from chemists, with AWS infrastructure built through CDK and a benchmark of multilingual embedding models on over one million chunks. As an AI consulting intern at Covestro I talked with business teams about their decision workflows and built an agentic application with a React front end and a FastAPI backend, containerized with Docker and deployed to AWS with GitLab CI/CD. Earlier, I predicted outcomes of a chemical synthesis process from sensor time series, so process data from production plants is familiar ground. Computer vision is the area where I have the least professional experience, and I am working on it.

Urenco's work on enrichment technology gives AI a very concrete job: safe and efficient industrial operations, where results have to be verifiable. Bringing LLMs, agents and vision into that environment, in an R&D team that works with engineering and operations, is the kind of problem I want to spend my time on.

I am based in Münster, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel to your sites. My German is at B1 level, and I work daily in English. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
