Application for AI Tech Consultant

Dear elunic team,

I am writing to apply for the AI Tech Consultant position at elunic. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part I like best is the one your posting starts with: understanding where a process loses time, then building something people can try.

As an AI consulting intern at Covestro, I sat with business stakeholders to understand how they made decisions day to day, advised them on where an agentic setup could help, and then built it myself: a LangGraph application that sends each request to vector search, LLM inference or summarization, with a FastAPI backend and a React front end, deployed to AWS.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction system and report directly to the CTO. I build first versions with Claude Code, custom skills and agentic coding workflows, which is how one person could take the system from raw documents to a multi-agent LangGraph pipeline, an MCP service and a review app for domain experts. Measured against ground truth from SAP systems, precision and recall rose from 33% and 45% to 93% and 90%.

The decision I would bring into your customer meetings is the one I made for a second, high-volume data source at Kniit. An agent was possible, but plain code was the better answer: the deterministic pipeline cut a projected $200,000 LLM budget to near-zero recurring cost and pushed accuracy toward 100%. I would make the same call in front of a customer.

eluna puts agents into service, sales and operations work at industrial SMEs. My own work has been with industrial and energy-sector data at Covestro and Kniit, and I would like to be the person who turns a customer's problem into a first working version within days.

I will be based in Munich, hold an EU Blue Card and can start from 15 November 2026. I am happy to travel to customer sites. My English is business fluent and my German is at B1; I am actively improving it. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
