Application for Product AI Engineer

Dear IDM team,

I am writing to apply for the Product AI Engineer position at IDM. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it on extracting reliable, structured information from long, domain-specific text, which is close to what clinical documentation asks for.

At Kniit, a start-up working for the German energy sector, I am the only developer of an information-extraction system for regulatory and technical documents and report directly to the CTO. I own the pipeline from ingestion and chunking to the extraction itself, a multi-agent LLM setup in LangGraph, and I measured every change against ground truth derived from SAP systems. Precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM with deterministic code, which cut a projected $200,000 LLM budget to near-zero recurring cost. Choosing the cheaper, faster approach when it is good enough matters even more in a hospital, where latency and compute are limited.

My Master's thesis at Covestro was on the transformer side of NLP. I benchmarked multilingual embedding models on over a million chunks of internal chemical data, fine-tuned models for retrieval, and built an automated evaluation pipeline with RAGAS and PytrecEval against ground truth written by chemists, running on AWS. Separately, I fine-tuned an Open Llama 3B model with QLoRA. I work with Docker, Kubernetes and GitLab CI/CD; experiment tracking with MLflow and training clinical models on real patient data would be new to me, and that is the part of the role I most want to learn.

IDM is unusual in two ways that matter to me. ORPHEUS is not a prototype: it has been running at UKE since early 2025 and, by your account, in more than 40 hospitals. And as a non-profit owned by UKE, you work with real German clinical documentation from the UKE partnership. I would like to help make the models behind that product more accurate and cheaper to run.

I will be based in Hamburg, hold an EU Blue Card and can start from 15 November 2026. My English is business fluent and my German is at B1. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
