Application: AI R&D Engineer (GenAI)

Dear Hiring Team,

I am writing to apply for the AI R&D Engineer position at Atyos. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that time went into getting information out of unstructured documents and making it searchable for agents.

At Kniit GmbH, I am the only developer on a knowledge-extraction pipeline for the German energy sector. It reads complex regulatory and technical documents with LangGraph agents running in parallel, and I took precision and recall from 33% and 45% to 93% and 90%, checked against ground truth from SAP systems. I also built an MCP query service on top of the knowledge graph, so agents get answers in milliseconds, and I use it from Claude Code every day.

My thesis at Covestro was about RAG. I automated the evaluation of retrieval and generation with RAGAS and PytrecEval, benchmarked multilingual embedding models on more than a million chunks of internal data, and compared chunking strategies and vector databases. I built the AWS side of that evaluation with Lambda, SQS and DynamoDB, defined in CDK.

For the chatbot and integration work you describe, my Covestro internship is the closest match. As an AI consulting intern I talked to business stakeholders about their decision-making, then designed and deployed an agentic LangGraph application with a React front-end and a FastAPI backend. I containerized it with Docker, deployed it to AWS with CDK and ran it through GitLab CI/CD. Terraform and SageMaker are new to me. Bedrock I know only from my own project work, and I would use the training time you offer to close those gaps.

What stands out about Atyos is that you give people time and budget to train and certify on the cloud technologies you use. I want to go deeper on AWS, and a team that works on RAG and agentic projects for clients on that platform is a good place to do it.

I am based in Strasbourg, hold an EU Blue Card and can start on 15 November 2026. I work in English at business level. I am happy to travel to client sites when a project needs it.

Thank you for considering my application. I would be glad to walk you through the Kniit pipeline.

Kind regards,

Chandu Prasad Bhairapu
