Application for AI Engineer, Agentic Systems (Claude Code)

Dear CasinoVibes Hiring Team,

I am writing to apply for the AI Engineer, Agentic Systems (Claude Code) position at CasinoVibes. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agentic systems that I built and ran with Claude Code.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I built the multi-agent part in LangGraph, with entity-extraction, relationship-analysis, consolidation and reflection agents running in parallel, and raised precision and recall from 33% and 45% to 93% and 90% against an SAP-derived ground truth. For a second, high-volume source I replaced the LLM calls with a deterministic code pipeline, which cut a projected $200,000 LLM budget to near-zero running cost. Knowing when not to use an agent was part of the design.

On tool design, I wrote an MCP query service that exposes the knowledge graph with millisecond retrieval and plugged it into Claude Code, so coding agents could look up domain facts instead of guessing. I use Claude Code every day, with custom skills and workflows, and I know how context and tool descriptions change what an agent does. At Covestro I built a LangGraph agent that routes between vector search, general inference and summarisation, and I measured RAG quality with RAGAS and PytrecEval. Day to day I work in Python, FastAPI, Docker and AWS CDK, with Git and GitLab CI/CD for testing and delivery.

CasinoVibes asks candidates to walk through an agent they built and to solve a real task live in Claude Code. That is how I like to work: architecture decisions first, shown on a real problem. A team that treats the agent's tools and guardrails as engineering, not prompting, is the kind I want to join.

I am based in Germany, fully remote works for me, I hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application. I would be glad to walk you through the Kniit pipeline.

Kind regards,

Chandu Prasad Bhairapu
