Application for Frontier Engineer (d/f/m)

Dear Hiring Team,

I am writing to apply for the Frontier Engineer (d/f/m) position at Cognizant. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently a multi-agent knowledge-extraction system for the German energy sector.

At Kniit I was the sole developer of a knowledge-extraction pipeline, reporting to the CTO and working with SAP domain experts. I built the multi-agent extraction in LangGraph, with entity, relationship, consolidation and reflection agents running in parallel, and raised precision and recall from 33% and 45% to 93% and 90% against a ground truth taken from the SAP system. I also built an MCP query service on top of the knowledge graph and connected it to Claude Code. Claude Code, custom skills and agentic coding workflows are part of how I write software every day, and I check what the agents produce before it ships.

Retrieval is the area I know best. My Master's thesis at Covestro covered RAG evaluation with RAGAS and PytrecEval, chunking strategies, vector databases and benchmarking multilingual embedding models on more than a million chunks. At Kniit I replaced an LLM-based extraction step with deterministic code for a second high-volume source, which cut a projected $200,000 LLM budget to near-zero running cost. That taught me to judge when an LLM is the right tool and when it is not.

On the delivery side, I worked as an AI consulting intern at Covestro. I sat with business stakeholders to understand how they make decisions, then designed and deployed an agentic LangGraph application with a React front end and a FastAPI backend, containerised with Docker and deployed to AWS with CDK and GitLab CI/CD. At Kniit I shipped a graph-curation web app on Azure so that domain experts could approve changes themselves.

Cognizant's pod model, where a small team works directly with clients and owns what it builds in production, is the way I like to work. It is close to how I ran the Kniit pipeline from first idea to handover. I am based in Frankfurt am Main, hold an EU Blue Card, can start on 15 November 2026 and am happy to work at client sites.

Thank you for considering my application. I would welcome the chance to talk about the work your pods are doing.

Kind regards,

Chandu Prasad Bhairapu
