Application for Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at context/fab. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system built together with its domain experts.

At Kniit I worked directly with SAP experts in the German energy sector to understand what they needed, and I owned the result from data ingestion to a deployed web app. I built multi-agent extraction with LangGraph that raised precision and recall from 33% and 45% to 93% and 90%, measured against ground truth from the customer's own SAP system. The experts validate every change to the knowledge graph in a React and Python interface on Azure, so I know how much of the work is agreeing on what "correct" means with the people who run the process. I also replaced an LLM-heavy extraction step with deterministic code for a high-volume source, which cut a projected $200,000 LLM budget to near-zero running cost.

At Covestro I worked with business stakeholders on their decision-making workflows, advised them on how agentic AI could help, and turned that into a LangGraph application with a FastAPI backend, deployed to AWS with Docker and CDK. Earlier I built models on sensor time-series from chemical production and put them in a dashboard that chemists used to test parameter changes before running a batch. That work taught me to read process data and explain results to plant staff.

I have not yet worked with PLCs, OPC UA, MQTT or SCADA systems, and I would learn them on the job. The parts I do know, Python, APIs, databases and connecting messy data sources into one model that agents can query, are close to what a Context Graph needs. I have also built a knowledge graph with Neo4j and an MCP query service on top of it.

context/fab's idea of a factory that understands its own equipment and processes, and of agents that work on that context, is where I want to build. Being the person who takes this into real plants and brings the field learnings back to the product team is the kind of role I am looking for.

I am based in Munich, hold an EU Blue Card, can start on 15 November 2026 and am happy to travel regularly to customer sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
