Application for Applied AI Engineer

Dear Hiring Team,

I am writing to apply for the Applied AI Engineer position at ElevenLabs. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agent systems that other people depend on. That is the kind of work this role describes.

At Kniit I was the sole developer of a multi-agent extraction pipeline in LangGraph for the German energy sector. The task was to pull knowledge out of complex regulatory documents for domain experts. I built the ingestion, prompts and indexing, measured the results against ground truth derived from the SAP system, and took precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with deterministic code and cut a projected $200,000 LLM budget to near-zero recurring cost. Knowing where LLMs fail, and when not to use one, came from that work.

Reliability and evaluation have been my focus since my thesis at Covestro, where I automated RAG evaluation with RAGAS and PytrecEval against chemist-provided ground truth. As an AI Consulting Intern there I talked to business stakeholders about their decision workflows, then built and deployed an agentic application with LangGraph, FastAPI and React on AWS. At Kniit I also built an MCP query service for the knowledge graph and a web interface where domain experts validate and approve knowledge-graph changes. I work daily with Python, SQL and LLM APIs, and with Claude Code every day.

What draws me to this role is that ElevenLabs builds agents for its own marketing and growth teams on the same platform its customers use. Being forward-deployed to a growth pod means finding the problem first and then owning it until the numbers show whether it worked. I have not worked with GTM data before, but I have done the rest of that loop with domain experts at Kniit and Covestro.

I am based in Germany, hold an EU Blue Card and can work in GMT+1. I can start on 15 November 2026. Thank you for considering my application. I would be glad to talk through the details.

Kind regards,

Chandu Prasad Bhairapu
