Application for AI-Solution Developer (m/f/d)

Dear Emma Uebbing, dear Jonathan Lottmann,

I am writing to apply for the AI-Solution Developer position at Flender. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly agentic systems and RAG for business users in enterprise settings.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector. I built a LangGraph multi-agent pipeline with entity-extraction, relationship-analysis, consolidation and reflection agents, and tested it against ground truth from the customer's SAP system. Precision and recall went from 33% and 45% to 93% and 90%. I also exposed the knowledge graph through an MCP query service and integrated it into Claude Code for agentic development workflows.

At Covestro I worked as an AI consulting intern. I talked with business stakeholders about how they make decisions, advised where agentic AI could help, and turned that into a LangGraph application with a React frontend and a FastAPI backend, deployed on AWS with CDK and GitLab CI/CD. My thesis there evaluated RAG systems with RAGAS, so judging quality and scalability of AI solutions is work I know well. I work with AI tools such as Claude Code and have deployed on both AWS and Azure. I have not used Copilot Studio or Azure AI Foundry in a job, but the agent and platform concepts carry over and I would learn them quickly.

I am drawn to the Flender AI-Factory because it takes AI use cases across the business into real systems and processes, with business, IT and platform teams working together on them. Building reusable agent components for that is the kind of work I want to do.

I am based in Münster, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
