Application for Software Engineer

Dear Hiring Team,

I am writing to apply for the Software Engineer position at freiheit.com technologies. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it as a developer who owns a system from the first requirement to production.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector. I owned ingestion, chunking, prompt engineering and indexing, worked with SAP domain experts, and reported to the CTO. I also built the Expert Interface, a React frontend with Python microservices on Azure that lets domain experts approve changes to the knowledge graph. Replacing LLM calls with a deterministic pipeline for one high-volume source cut a projected $200,000 LLM budget to near-zero recurring cost.

At Covestro I built an agentic application with a React frontend and a FastAPI backend, containerised it with Docker and deployed it to AWS with CDK and GitLab CI/CD. I also wrote my thesis there on evaluating RAG systems, and benchmarked embedding models on over a million chunks of data. I work with Claude Code and clean code principles to keep delivery fast and the codebase readable.

I am drawn to freiheit.com because your engineers run the hiring process, teams stay at five people or fewer, and you take full ownership of client projects instead of supplying extra hands. That is the way I like to work. I have not used Go, Kotlin or TypeScript professionally, but I learn languages quickly, and I am happy to work from the Hamburg office five days a week.

I am based in Hamburg, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application. I would be glad to talk with your engineers.

Kind regards,

Chandu Prasad Bhairapu
