Application for Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at Lio. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system that I took from first customer conversations to a deployed product.

At Kniit I worked directly with SAP domain experts in the German energy sector to understand what they needed, and I owned the result from data ingestion to production. I built an MCP query service that exposes the knowledge graph as an API with millisecond-latency retrieval, and a React and Python web app on Azure where the experts validate every change. The multi-agent extraction I wrote with LangGraph raised precision and recall from 33% and 45% to 93% and 90%, measured against ground truth from the customer's own SAP system. For a high-volume source I replaced an LLM-heavy step with deterministic code, which cut a projected $200,000 LLM budget to near-zero running cost.

At Covestro I worked with business stakeholders on their decision-making workflows, advised them on how agentic AI could help, and turned their requirements into a LangGraph application with a FastAPI backend. I tested the APIs with Postman, containerised the stack with Docker, and deployed it to AWS with CDK and GitLab CI/CD. In my thesis I built the AWS infrastructure (Lambda, SQS, DynamoDB) behind a RAG evaluation setup, so debugging a pipeline across several services is familiar work.

I have not yet built integrations against SAP itself. I have worked next to SAP experts and used data derived from an SAP system, and I would pick up the interfaces on the job. Your posting says that engineering fundamentals and ownership matter more than a perfect CV, and that matches how I work.

I would like to join Lio because the job is to put AI agents into the systems that large enterprises already run, and to turn what customers need into product features that the next customer can reuse. A team backed by a16z and Y Combinator that works with Fortune 500 procurement teams from Munich is a place where I can do that with real ownership.

I am based in Munich, hold an EU Blue Card, can start on 15 November 2026 and am happy to travel to customer sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
