Application for AI Acceleration Specialist

Dear Hiring Team,

I am writing to apply for the AI Acceleration Specialist position at Neko Health. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part of this role that appeals to me most is that success is measured by adoption, not by what gets built.

At Covestro I worked as an AI Consulting Intern with business stakeholders. I sat down with them to understand how they made decisions, advised on where agentic AI could help, and turned that into a LangGraph application with a React front end and a FastAPI backend, deployed on AWS with CDK. At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector and worked daily with SAP domain experts. I also built a web app for them to review and approve changes to the knowledge graph, because the system was only useful if they trusted and used it.

On the applied AI side, my work covers LLMs, retrieval, agents, connectors and evaluation. I built multi-agent extraction with LangGraph, raised precision and recall from 33

Neko's idea of putting an AI builder into each team, as the People team already has, is what draws me to this role. I have not run formal process-mapping or training sessions, and I would learn the short course quickly. What I have done is listen to a team, build for them, and go back to see what the team really uses.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
