Application for AI Harness Engineer

Dear Hiring Team and Friedrich,

I am writing to apply for the AI Harness Engineer position at xHeron. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer turning language models into a multi-agent knowledge-extraction system for the German energy sector.

At Kniit I owned that system from raw documents to production and reported to the CTO. Four LangGraph agents run in parallel for entity extraction, relationship analysis, consolidation and reflection, and most of the work was the layer around the models: ingestion, chunking, deciding what context each agent sees, and comparing agentic, deterministic and monolithic strategies. Measured against a ground truth taken from SAP data, precision and recall rose from 33% and 45% to 93% and 90%.

That comparison taught me when not to use an agent. For a second, high-volume source I replaced the LLM calls with deterministic code, which cut a projected $200,000 LLM budget to almost nothing and made the output more reliable. I also built an MCP query service that Claude Code calls with millisecond latency, and a React and Python app on Azure where domain experts validate and approve changes to the knowledge graph, which is a human handoff in practice.

Evaluation has been a thread through my work. For my Master's thesis at Covestro I automated RAG evaluation with RAGAS and PytrecEval against answers written by chemists, and benchmarked multilingual embedding models on over a million chunks. Before that I deployed a LangGraph agent there that routes decisions between vector search, general inference and summarisation, with FastAPI and Docker on AWS via CDK and GitLab CI/CD.

xHeron is trying to hand over the work, not give operators another tool to supervise, and that makes the harness the product. Short-term rental guest communication, team coordination and issue resolution are open-ended tasks where an agent has to know when to act and when to ask for help. I have built that kind of control layer alone at an early-stage startup, and I would like to do it next to a CTO and a small engineering team.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
