Application for Graduate AI Engineer – Banking Solutions

Dear SAP Fioneer AI innovation team,

I am writing to apply for the Graduate AI Engineer – Banking Solutions position at SAP Fioneer. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently integrating LLMs into enterprise workflows together with SAP domain experts.

At Kniit, a start-up working for the German energy sector, I was the only developer of an agentic knowledge-extraction pipeline and reported directly to the CTO. I worked with SAP domain experts to understand their processes, then built a LangGraph system in which extraction, relationship, consolidation and reflection agents run in parallel over regulatory and technical documents. Measured against a ground truth derived from SAP system data, precision and recall rose from 33% and 45% to 93% and 90%. Not every problem needed an LLM: for a second, high-volume data stream I built a deterministic pipeline and cut a projected $200,000 LLM budget to near-zero recurring cost. Deciding where an LLM helps and where plain code is better was the most useful thing I learned there.

I have taken AI features from prototype to deployment more than once. At Covestro, as an AI consulting intern, I sat with business stakeholders to understand their decision-making workflows and turned their requirements into an agentic application with a FastAPI backend and React frontend, containerized with Docker and deployed to AWS with CDK through GitLab CI/CD. At Kniit the stack runs on Azure with Kubernetes, and I built an MCP service that gives AI agents millisecond-latency access to the knowledge graph. My master's thesis at Covestro was about testing these systems properly: automated RAG evaluation with RAGAS and PytrecEval against chemist-provided ground truth.

SAP Fioneer's AI Agent caught my attention because it runs inside the bank's own S/4HANA environment, on-premise or in the cloud, with the customer's preferred LLM, so data does not have to leave the institution. Analysing suspense accounts in plain language is the kind of narrow, measurable use case I like to build. I would like to learn the banking side from your experts while contributing the engineering I already do.

I will be based in Berlin (Munich works for me too), hold an EU Blue Card and can start on 15 November 2026. I am happy to travel for customer work. My German is B1 and my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
