Application for AI Engineer (m/f/d)

Dear Mr Bielsa,

I am writing to apply for the AI Engineer position at BIT Capital. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic extraction system that domain experts rely on.

At Kniit GmbH I own a knowledge-extraction pipeline for the German energy sector from first scoping to delivery, reporting to the CTO. I built multi-agent LangGraph extraction with prompts, retrieval and a reflection step, and measured it against a ground truth taken from the customer's SAP system. Precision and recall went from 33% and 45% to 93% and 90%. That is the same loop your posting describes for investment signals: define the truth, run the model, measure, iterate. I also replaced LLM calls with deterministic code for one high-volume source and cut a projected $200,000 LLM budget to near-zero recurring cost, so cost is part of how I choose a model.

For agents I work with Claude Code and custom skills every day, and I built a Model Context Protocol service that gives agents millisecond access to a knowledge graph. Its sibling is a React and Python microservices app on Azure where experts approve changes before they reach the graph. At Covestro I wrote my thesis on RAG evaluation with RAGAS and PytrecEval, and I deployed a LangGraph application to AWS with CDK and GitLab CI/CD. I have not used Databricks or Anthropic Managed Agents in a job, and I have little finance background. I learn a new domain by building against its data, as I did with SAP and energy regulation.

BIT Capital describing itself as an AI-native investment platform, with Aion already used by the investment team every day, is what draws me. Building agents that people rely on for real decisions, next to the Chief AI Officer, is the kind of ownership I am looking for.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel when needed. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
