Application for Software Engineer (m/f/d) Python & 3D Printing

Dear Hiring Team,

I am writing to apply for the Software Engineer (m/f/d) Python & 3D Printing position at Nanoscribe. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with Python as my main language and a mechanical engineering degree behind it.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I talked through requirements with SAP domain experts, broke the work into pieces, and built Python microservices, a FastAPI-based backend and a React interface for expert review, running on Azure with Docker and Kubernetes. I also redesigned one extraction path as deterministic code instead of LLM calls, which cut a projected $200,000 LLM budget to near-zero running cost. That is the kind of optimization across layers that your posting describes.

I use AI coding tools every day. At Kniit I worked with Claude Code, custom skills and agentic coding workflows, and I paid attention to clean code and reviewing what the tools produced. At Covestro I built and deployed an application with a React front end and a FastAPI backend on AWS, using GitLab CI/CD, and earlier I worked with NumPy and SciPy on numerical and sensor time-series data from chemical processes. I have not worked with 3D meshes, GPU graphics or camera and sensor hardware, and I would be learning those parts on the job. My mechanical engineering background means I am comfortable talking with engineers and domain experts about physical systems.

Nanoscribe's printers combine a touch interface, numerical algorithms and hardware control in one layered client/server stack, and the new Zeiss Innovation Hub next to the KIT campus is a good place for that. Working directly with domain experts on R&D projects and contributing to product definitions is how I like to work.

I am based in Karlsruhe, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
