Application for Machine Learning Engineer

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer position through Global FinTech Talent. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on retrieval, evaluation and getting models into production.

You ask for models I have personally built, evaluated and deployed. At Kniit I am the sole developer of a multi-agent extraction pipeline for the German energy sector. I built the evaluation against a ground truth derived from SAP system data and iterated until precision and recall went from 33%/45% to 93%/90%. For a second, high-volume data stream I replaced LLM calls with a deterministic extraction pipeline, which removed a projected $200,000 LLM budget. I also built an MCP query service on top of the knowledge graph that answers retrieval requests in milliseconds, so cost and latency were part of the design from the start.

Retrieval and embeddings were the subject of my Master's thesis at Covestro. I benchmarked multi-lingual embedding models on more than 1M chunks of internal chemical data, designed chunking and indexing strategies on vector databases, and fine-tuned models for retrieval. I measured the results with RAGAS and PytrecEval against ground truth provided by chemists, and ran the evaluation as an automated pipeline on AWS (Lambda, SQS, DynamoDB, CDK). That thesis was a research setting, not a consumer product; the Kniit pipeline is the one I have taken into real use.

On the classical ML side, I built and compared Random Forest, XGBoost and LSTM models on sensor time-series at Covestro, with engineered lag features and a Streamlit dashboard that lets chemists test parameter changes before running batches. Earlier at Cognizant, an LSTM for EV load forecasting reached 96% test accuracy. I work mainly in Python, with PyTorch and Hugging Face Transformers, and have fine-tuned open-source LLMs with QLoRA.

An AI-native assistant where search, ranking and personalisation decide the user experience is the kind of problem I want to own, from data and training through deployment and monitoring. I am based in Germany, hold an EU Blue Card, can work remotely and can start on 15 November 2026. Thank you for considering my application. I would be glad to walk you through any of these systems in detail.

Kind regards,

Chandu Prasad Bhairapu
