Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at Control Risks. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently a knowledge-graph extraction pipeline on Neo4j that I owned from ingestion to expert review.

At Kniit I was the sole developer of that system for the German energy sector and reported directly to the CTO. Four extraction agents in LangGraph (entities, relationships, consolidation, reflection) read complex regulatory documents, and I measured them against a ground truth derived from the customer's SAP system. Precision and recall went from 33% and 45% to 93% and 90%. Because the ground truth was derived from an SAP system, every prompt or agent change could be checked against numbers. For a second, high-volume source I replaced the LLM calls with deterministic code and cut a projected $200,000 LLM budget to near zero, so I know when a prompted model is the wrong tool.

I also built an MCP service that exposes the graph for millisecond-latency retrieval, plus a React and Python expert interface on Azure where domain experts approve graph changes. LLM calls ran through LiteLLM, and I built my own Claude Code skills and used it for agentic development, so keeping context and skills files for a shared codebase is a small step.

At Covestro I designed RAG pipelines, fine-tuned models for retrieval, benchmarked multilingual embedding models on over one million chunks and evaluated retrieval with RAGAS and PytrecEval. Graphiti, Databricks and the sanctions and KYC domain are new to me. I would begin with the graph schema and the evaluation harness, and read how Graphiti handles episodes and entity resolution before touching production data.

The part of the role I would most like to own is the layer where an analyst types a compliance question and gets a Cypher query and an answer they can trace back to its source. Getting that right depends on the schema and on knowing how often the extraction is wrong, and those two things are where my Kniit work sits.

I am based in Berlin, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
