Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at PrimeIT. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly LLM agents and RAG systems that run on AWS and Azure.

At Kniit I am the sole developer of a knowledge-extraction pipeline for the German energy sector. I built a multi-agent LangGraph system over complex regulatory documents and raised precision and recall from 33%/45% to 93%/90%, measured against ground truth derived from the customer's SAP system. I also wrote an MCP query service on top of the knowledge graph and a React and Python web app on Azure where domain experts approve changes. For a second, high-volume source I replaced the LLM calls with code, which cut a projected $200,000 LLM budget to near-zero running cost.

Evaluation and deployment are where I have spent most of my time. My Master's thesis at Covestro automated RAG evaluation with RAGAS and PytrecEval against chemist-provided ground truth, and I benchmarked embedding models on more than one million chunks in vector databases. In my consulting internship I deployed a LangGraph application with FastAPI, Docker, AWS CDK and GitLab CI/CD. I have also used Kubernetes at Kniit and worked with PyTorch, TensorFlow and Scikit-Learn on earlier forecasting and prediction models.

I like that PrimeIT works on national and international projects, because it means meeting different clients and domains, and I enjoy translating a business workflow into something a team can run. At Covestro I did that with stakeholders in a consulting role.

I am based in Lisbon, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
