Application for Data Scientist (w/m/d) – Applied AI

Dear Hiring Team,

I am writing to apply for the Data Scientist (w/m/d) – Applied AI position at smartclip. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it agents that find answers across large document collections and forecasting models on process data.

Your first focus area is close to what I do now. At Kniit I am the sole developer of a knowledge-extraction pipeline for the German energy sector. I built a multi-agent LangGraph system for retrieval and extraction over complex regulatory documents and raised precision and recall from 33%/45% to 93%/90%, measured against ground truth derived from the customer's SAP system. I also wrote an MCP query service on top of the knowledge graph. For a second, high-volume source I replaced the LLM calls with a code-based pipeline, which cut a projected $200,000 LLM budget to near-zero running cost. Checking a result before trusting it is how I work.

My thesis at Covestro was about exactly that: I automated generation and retrieval evaluation of RAG systems with RAGAS and PytrecEval against chemist-provided ground truth and benchmarked embedding models on more than one million chunks. In an earlier internship I compared Random Forest, XGBoost and an LSTM on sensor time series, with lag features and rolling windows, and benchmarked them against empirical curve fitting. I handed the result to chemists as a Streamlit tool. I have used Docker at Kniit and Covestro, Kubernetes and Postgres at Kniit, and I work with coding agents such as Claude Code, checking what they generate. I have not worked with Spark in a job yet; it is the part of your second focus area I would build up first.

smartclip appeals to me because it measures TV advertising across more than 150 channels and wants that to be as plannable as digital, and because the data scientists own a question from the first experiment to a prototype that Engineering turns into a product. I like working that way.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel to the Berlin office and the company offsite. My German is at B1 level and improving; my working language is English. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
