Application for Platform Engineer – Robot Data Infrastructure

Dear Hiring Team,

I am writing to apply for the Platform Engineer – Robot Data Infrastructure position at NEURA Robotics. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work has been Python backend services and data pipelines that have to run reliably after they ship.

At Kniit I am the only developer of a knowledge-extraction pipeline for the German energy sector, from ingestion and chunking to indexing, reporting to the CTO. I built its Python microservices backend with a React curation interface on Azure, where domain experts approve changes. Multi-agent LangGraph workflows annotate the source documents, and I measured them against a ground truth built from SAP data, which raised precision and recall from 33% and 45% to 93% and 90%. That is close to the human-in-the-loop annotation setup you describe, only for documents instead of robot episodes. For one high-volume source I replaced the LLM with deterministic code and cut a projected $200,000 budget to almost nothing.

On cloud and automation, at Covestro I containerized a FastAPI and LangGraph application with Docker and deployed it on AWS with CDK and GitLab CI/CD. During my Master's thesis I built AWS infrastructure (Lambda, SQS, DynamoDB) with CDK to run large RAG evaluations, and I benchmarked embedding models over more than a million data chunks.

I have not worked with ROS 2 or DDS, TypeScript in production, Terraform, Ansible or video codecs. Python and AWS are where I work every day, and I would pick up the rest quickly, starting with the infrastructure-as-code and container tooling I already know from CDK and Docker.

NEURA is building cognitive robots, and robot learning depends on clean, well-structured data. Owning the pipeline that gets sensor recordings from the data collection sites to training is work I would like to do.

I am based in Stuttgart, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
