Application for (Junior) Consultant Generative AI (m/w/d)

Dear Hiring Team,

I am writing to apply for the (Junior) Consultant Generative AI position at BearingPoint. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it integrating large language models into real business workflows.

At Covestro I worked as an AI Consulting Intern. I sat down with business stakeholders, learned how they make decisions, and turned those use cases into technical requirements and a solution approach. The result was an agentic application built with LangGraph, a React front end and a FastAPI backend, containerised with Docker and deployed on AWS with CDK. My Master's thesis there was on RAG: I built the evaluation with RAGAS and PytrecEval, benchmarked multilingual embedding models on over one million chunks of internal data, and fine-tuned models for retrieval.

Most recently I was the sole developer of a knowledge-extraction system for the German energy sector at Kniit, reporting to the CTO and working with SAP domain experts. I designed the multi-agent LangGraph pipeline, which raised precision and recall from 33% and 45% to 93% and 90%, and exposed the knowledge graph to other systems through an MCP query service. I also built the web interface for experts on Azure with React and Python microservices, so I have seen both the architecture side and the hand-over to users.

BearingPoint's mix of management and technology consulting is what I am looking for. I want to keep building LLM solutions, but closer to the client's problem and with the chance to shape a GenAI service portfolio. I am happy to travel nationally and internationally for client projects.

I am based in Frankfurt, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and improving; I work in English every day. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
