Application for Software Engineer, Quality Engineering

Dear Hiring Team,

I am writing to apply for the Software Engineer, Quality Engineering position at RepRisk. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part of that work I enjoy most is making sure the output can be trusted: checking it against ground truth, automating the checks and putting them in the pipeline.

My master's thesis at Covestro was an automated evaluation of RAG systems. I built the generation and retrieval checks with RAGAS and PytrecEval, compared answers to chemist-provided ground truth, and ran the infrastructure on AWS with CDK (Lambda, SQS, DynamoDB). At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I validated the multi-agent extraction against an SAP-derived ground truth, which moved precision and recall from 33% and 45% to 93% and 90%. For a second data stream I replaced LLM calls with a code-based pipeline, so the results were repeatable and the projected LLM cost of $200,000 dropped to almost nothing.

On the tooling side, I work in Python every day. At Covestro I containerized a FastAPI and React application with Docker, deployed it to AWS with CDK, and used GitLab with a CI/CD pipeline. I tested the APIs with Postman. I have not owned a dedicated test framework yet, which is the part of this role I would grow into; my starting point is solid Python, CI/CD, cloud setup and a habit of investigating why a component or an integration failed. I also work with Claude Code every day, so I know both how to use AI-generated code and how to check it.

RepRisk's data is built from a mix of AI and human analysts, so checking quality across that chain is a real engineering problem, and a shared quality team that makes this easy for other engineers fits how I like to work. I would like to build tools that other teams adopt because they are clear and easy to maintain.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application. I look forward to talking about how I can help.

Kind regards,

Chandu Prasad Bhairapu
