Application for Data Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the Data Engineer position at KiK. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently data pipelines that bring documents from several sources into a structured, checked form, which is the core of the role you describe.

At Kniit I am the sole developer of a pipeline for the German energy sector. I own it from ingestion and chunking to indexing into a Neo4j knowledge graph. Against a ground truth derived from SAP systems I raised precision and recall from 33% and 45% to 93% and 90%, so I know how to measure data quality instead of assuming it. For a second, high-volume source I wrote a deterministic, code-based pipeline, which removed a projected $200,000 LLM cost. I worked with SAP domain experts to turn their requirements into data structures, and they approve changes to the data in a web app I built on Azure.

My engineering routines are the ones you list. I work in Python and SQL with Postgres and MongoDB, keep everything in Git, write tests and documented code, and at Covestro I deployed through GitLab CI/CD with Docker and AWS CDK. Earlier, I engineered features from sensor time-series with Pandas and benchmarked embedding models on more than one million chunks for my Master's thesis. I have not yet worked with Databricks or Spark in production, and I would pick up the platform quickly with the team's help.

KiK is building up its Data Science area and wants data models and pipelines that carry a prototype to daily use, from ordering goods to the shops. Joining a data hub team at that stage, where I can help shape how the foundation is built and used by data scientists and analysts, is what I am looking for.

I am based in Dortmund, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
