Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at Arrows. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on prompting, LLM pipelines and measuring whether they actually work.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector and report to the CTO. I built multi-agent extraction with LangGraph and iterated on prompts and agent design against a ground truth derived from the customer's SAP system. Precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with a deterministic pipeline, which removed a projected $200,000 LLM budget. Choosing where a model is worth its cost, and proving it with numbers, is the part of the job I enjoy most.

Evaluation was also the subject of my Master's thesis at Covestro. I automated generation and retrieval evaluation of a RAG system with RAGAS and PytrecEval against ground truth from chemists, and benchmarked multilingual embedding models on more than one million chunks. That is the kind of benchmark work you describe for setting the direction of R&D.

On the product side I wrote Python backends with FastAPI and React front ends at both employers. At Kniit that is Expert Interface, where domain experts approve changes to a knowledge graph, and Postgres is part of that stack. I have not used TypeScript in a job, and my React experience comes from these two projects rather than years of front-end work. Those are the areas where I would need to catch up.

What draws me to Arrows is that patent drafting is a task where output quality can be measured and improved, and that the evaluation framework sits at the center of the work rather than at its edge. Shipping that to IP teams who already see large efficiency gains is a concrete goal.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
